SUSTAINABLE INVESTMENT CIRCLE · V1 BUILD PLAN

The Wayfinder map — from finished prototype to live community

Built with Matt Pocock's **/wayfinder** skill. The map plans and does not build: every ticket asks one question and its answer is a decision. The UI is already designed — the fog is platform, commercial, privacy and operating decisions.

DESTINATION — THE END STATE OF THE WHOLE MAP

A live, production SIC v1 that an ESG professional can join, complete a profile, find and connect with members, message, post in specialist channels, browse research, events and partners, and request Premium — matching the 19 Aug 2026 walkthrough — with enough admin tooling for a small team to run it day to day.

HOW IT WORKS

Name the destination 1
For the whole map, not the first session.

Breadth-first grill 2
Find the fog. No fog → skip the map, go straight to spec.

Chart tickets 3
Precise questions get a type, a mode (HITL / AFK) and blocking edges.

One ticket per session 4
Claim → decide → resolution comment → close → one line in "Decisions so far" → stop.

Graduate the fog 5
Each decision clears nearby fog; anything now specifiable becomes a ticket.

Hand off when clear 6
/to-spec → /to-tickets → /implement. Wayfinder never continues into code.

Decisions so far

Already made by the prototype — confirm, don't re-litigate

- **Brand & IA** — name, green/gold system, 13-item nav, Advertise & Support CTAs
- **Onboarding** — name, org, market type, job role, email, password
- **Home** — feed with files, invites (email/CSV), stats, people & events rails
- **Members** — search + Country · City · Market type · Job role filters
- **Profile** — strength meter, PDF download, QR connect, public page
- **Messages & Channels** — DMs, private groups, 15 seeded ESG channels
- **Research · Events · Partners** — ACSI & RIAA; member-listed events; Harvest by Dasseti
- **Premium** — US$99 founding / US$149 annual; external Airwallex link; intelligence + public page

The frontier — start here

Open, unblocked, unclaimed. These six unblock everything else.

1 **confirm-baseline** GRILLING
Which screens are firm v1, which aspirational (Premium analytics?), which details placeholders.
Blocks: everything

2 **build-vs-platform** RESEARCH GRILLING
Custom build vs Circle / Mighty Networks / Hivebrite / Discourse vs headless hybrid.
Blocks: stack, auth, domain model, search

3 **commercial-model** GRILLING
Revenue lines & who pays; founding window; member targets; US$ pricing vs AU cohort.
Blocks: premium, partners/ads, seeding

4 **member-eligibility** GRILLING
Open vs vetted; corporate-email check; final market-type & job-role taxonomy.
Blocks: auth, domain model, invites

5 **privacy-and-residency** RESEARCH GRILLING
Privacy Act / APPs: "Who viewed me", others' profile PDFs, QR exchange, uploads, hosting.
Blocks: who-viewed-me, PDF/QR, hosting, legal

6 **operating-model** GRILLING
Admin roles, moderation, approvals, support inbox, hours per week.
Blocks: admin, curation, events, premium

Second-wave tickets

Unlock as the frontier clears · 20 tickets in four lanes · "←" = blocked by

Platform & data

tech-stack-hosting G
Stack, region, environments, CI/CD, backups, cost ceiling.
← build-vs-platform, privacy

identity-auth G
Password vs magic link; MFA; policy (min 6 is too weak); recovery.
← eligibility, stack

domain-model G
Member, Org, Connection, Message, Channel, Post, Event, Provider, Partner, Subscription, Alert, ProfileView.
← baseline, eligibility

search-approach R
Primary DB vs search service for the directory filters.
← build-vs-platform

accounts-setup T
Airwallex, domain/DNS, email domain, video hosting, analytics.
← stack, premium

Member experience

connection-model G
Request / accept, QR in-person flow, what is connections-only, blocking.
← domain-model

messaging-scope G
Real-time vs polling, groups, attachments, retention.
← domain, connection

feed-and-channels-rules G
Post types, file limits, who creates channels, featured video, moderation hooks.
← domain, operating

profile-pdf-qr R P
PDF template & consent; QR payload (URL vs vCard) and expiry.
← privacy, connection

invite-import G
Email template, CSV schema, limits, anti-spam.
← eligibility

notifications-alerts G
Alert types incl. Premium search alerts; in-app vs email; digests.
← domain, premium

responsive-accessibility G P
Walkthrough is desktop-only: mobile-web scope, WCAG target.
← baseline

Commercial & Premium

premium-entitlement G
Airwallex link → manual vs webhook activation; renewal, lapse, founding-rate lock, GST.
← commercial, operating

who-viewed-me-rules G
Consent (opt-in? anonymised?), retention, what each side sees.
← privacy, premium

premium-page-scope P
What the Premium home page holds and how it's edited — only a preview exists.
← premium

partners-advertising G
Partner tiers, ad placements, pricing, disclosure rules.
← commercial

analytics-success-metrics G
What "working" means at 30 / 90 / 180 days and the tooling.
← commercial

Operate & launch

moderation-admin G
Admin console: approvals, reports, partners, announcements.
← operating

research-curation G
Who adds providers, approval, categories, seed list, de-listing.
← operating

events-workflow G
Who lists, approval, fields, ICS export, past events.
← operating

cold-start-seeding G T
Launch cohort, founding outreach, seed content, fate of demo data.
← commercial, eligibility

legal-docs T
Privacy Policy, Terms, Guidelines, Partner & Premium T&Cs — legal review.
← privacy, commercial

Types G grilling · HITL P prototype · HITL R research · AFK T task · manual work

Not yet specified

The fog of war — graduate into tickets as decisions land

- Organisation as first-class entity, or a text field?
- "People to connect with" — rules or smarter?
- Content lifecycle: stale channels, expired events, lapsed Premium pages
- Geography beyond Australia; US$ vs AU pricing
- Data export & account deletion
- Rate limits / anti-spam for invites, DMs, posts
- Research providers vs Partners — one entity, two tiers?

Out of scope

Never graduates on this map — would be a new destination

- Native iOS / Android apps
- In-app card capture; any route but the Airwallex link
- Research marketplace / paid downloads
- Enterprise SSO; org-level subscriptions
- AI matchmaking or summaries beyond simple rules
- Multi-language; public job board

Before you start

Prerequisites and the rules that bite

- **Tracker:** GitHub, GitLab or local markdown — **not Jira**. Use a GitHub repo; native blocking links show the frontier. Mirror to Jira after /to-tickets.
- **Install:** `npx skills@latest add mattpocock/skills` → `setup-matt-pocock-skills` → `/wayfinder`
- **Plan only:** the prototype looks finished — no "just wiring up" a screen inside the map.
- **Cadence:** 26 tickets ≈ 20–25 sessions; research runs in parallel on `research/<name>` branches.

Source caveat. Narration wasn't transcribed; "Decisions so far" is read from screens and captions. If the voiceover states dates or targets, add them before session 1.

Suggested session order · one ticket per session · spin research early

S1 **confirm-baseline** — Walkthrough open
S2 **build-vs-platform** — Research, then grill
S3 **commercial-model** — Pricing & targets
S4 **member-eligibility** — Vetting & taxonomy
S5 **privacy-and-residency** — Research alongside S3–4
S6 **operating-model** — Who runs it
S7+ **Follow the frontier** — domain → connection → premium → rest

HANDOFF

/to-spec — Collapse decisions; attach the walkthrough as UI reference
→ **/to-tickets** — Slice the spec (Jira mirror here)
→ **/implement** — Build, one ticket at a time
